

Lower temperatures, Lower energy bills.

New ENERGY STAR® certified room air conditioners use 15 percent less energy than conventional models, reducing energy bills and helping our environment. So, you'll not only be saving money, you'll be doing your part to help use our nation's resources wisely. ENERGY STAR certified room air conditioners often include timers for better temperature control, allowing you to use the minimum amount of energy you need to cool your room. This mail-in rebate will give you \$20 back when you purchase an ENERGY STAR certified room air conditioner.

Bigger isn't always cooler.

Choosing the right-sized room air conditioner for the space you want to cool is critical for energy efficiency. Many people buy larger room air conditioners than they need, thinking that they will cool better, but an oversized unit has several disadvantages. Larger room air conditioners are more expensive initially and cost more to operate. In addition, oversized units can insufficiently dehumidify a room, leaving it feeling uncomfortably damp.

Room air conditioner sizes are rated in British Thermal Units per hour (BTUh). The chart below is tailored for New Hampshire's climate, helping you choose the right-sized room air conditioner for you.

| Area to be cooled (sq. ft.) | Capacity needed (BTUh) |
|-----------------------------|------------------------|
| 100-150 | 5,000* |
| 150-250 | 6,000 |
| 250-300 | 7,000 |
| 300-350 | 8,000 |
| 350-400 | 9,000 |
| 400-450 | 10,000 |
| 450-500 | 12,000 |
| 550-700 | 14,000 |
| 700-1,000 | 18,000 |

*Typically the smallest room air conditioner available is 5,000 BTUh.

Other factors to consider when choosing the right air conditioner:

- If the room is very sunny, increase the size by 10 percent. If it is shady, decrease size by 10 percent.
- If more than two people regularly occupy the room, add an extra 600 BTUh for each additional person.
- If your room air conditioner is intended for use in a kitchen, increase size by 4,000 BTUh.

The factors listed above will provide you with a rule of thumb for sizing a room air conditioner in New Hampshire. There may be other factors not considered here that could affect the size of the room air conditioner you choose, so check with a sales associate or qualified cooling professional when making your decision.

ROOM AIR CONDITIONER BEST PRACTICES

Does your unit need repair?

A unit in need of repair may not be operating efficiently. Depending on the cost of the repair, it may make sense to upgrade. This could not only save you energy and money, but also provide you with additional features not available in older models.

Does your unit cycle on and off constantly?

Continuous cycling may indicate that your unit is not properly sized for the space you want to cool. This can waste energy and fail to properly dehumidify the room.

Is your home unoccupied for long periods of the day?

Many new ENERGY STAR certified room air conditioners have built-in timers and temperature controls. Take full advantage of these to avoid wasting energy while you are away.

Congratulations on your decision to buy an ENERGY STAR® certified room air conditioner. Please fill out completely. All information below is required.

CUSTOMER INFORMATION
